

**ELIZABETH DANEMAN**

# **Sandpiper announces Southeast area service rep**

Elizabeth Daneman (pronounced "Dane-eh-man") has serviced TreeTop Peepers in the field since they were first introduced. While working as a biological technician at the Okefenokee NWR, she assisted with all phases of field work related to red-cockaded woodpecker management. Elizabeth used Tree Top Peepers extensively for routine nesting season checks, wilderness island surveys and monitoring. She performed all camera repair and maintenance on the pole-mounted video systems while at the Okefenokee.

Having recently completed a rigorous training program here at Sandpiper headquarters, we feel confident that Elizabeth can provide the high quality level of service clients expect on TreeTop Peepers. We also anticipate that shipping costs will be much reduced due to her proximity to the majority of TreeTop users. It is with great pleasure that Sandpiper Technologies in collaboration with Longleaf Technologies is pleased to introduce Elizabeth Daneman as a Factory trained service representative in the Southeastern U.S. We encourage you to use her services.

Elizabeth's background also includes 10 years as an instrument and equipment technician, USCG 100 Ton Master working as a delivery skipper with sailing and building sailboats being one of her passions, degrees in music and environmental science, and most recently working as an environmental field technician for the State of Florida. Throughout her varied career, Elizabeth has

held natural resource and wildlife issues dear to her heart and has been involved as a volunteer or technician in these areas for over 20 years.

"Having the opportunity to work in and experience some of the lesser developed areas of SE Georgia and NE Florida has given me an appreciation of the beauty and diversity this area offers," commented Elizabeth.

"Preservation and restoration of our remaining natural resources is vital to many species now facing the pressures of development and habitat decline. I am pleased to be involved with Sandpiper Technologies, to support their equipment and the biological community which uses this equipment to this end."

## **FIELD SERVICE PROGRAM**

TreeTop Field Service Program subscribers have an opportunity to work with either the Florida-based Longleaf Technologies or the California-based Sandpiper Technologies as their primary service center. Those with current FSP subscriptions through Sandpiper will continue to send their equipment to the Manteca, CA location, and will have the option to switch to the Florida-based service center when the FSP subscription is completed.

### **SHIP TREETOPS TO:**
